

1. User Manual: Electronic Document Management System (EDMS)

1. Introduction

Welcome to the enterprise Electronic Document Management System (EDMS). This system is designed to help you create, edit, collaboratively review, and approve internal documents in a centralized and transparent environment.

2. Getting Started

2.1 Updating Master Data (Administrators Only)

Before general use, the system administrator must upload the employee and department structures.

1. Navigate to the **Admin Dashboard** (`/admin`).
2. Upload the current enterprise reference data in `.XLSX` format.
3. The system will automatically parse the Excel file, clear old records, and populate the database with updated employees, managers, and departments.

2.2 System Login

1. Open the application in your web browser.
2. Enter your authorized **Login ID (Username)** provided in the enterprise directory.
3. Click the **Login** button. (*Note: No password is required based on current enterprise configurations*).
4. You can switch the user interface language (English, Russian, Chinese) using the Locale Switcher located in the top navigation bar.

3. Personal Document Storage

Upon logging in, you will be redirected to the **Dashboard / Personal View**.

- Here you can view a library of all documents you own.
- You can easily filter documents by their current statuses: **Draft**, **In Approval**, **Approved**, or **Rejected**.

4. Working with Documents

4.1 Creating and Importing

- **Create:** Click the button to create a new document. A blank canvas will open in the editor.
- **Import DOCX:** Use the Import view to upload an existing Microsoft Word `.docx` file. Our Python backend will parse the file and preserve its structure and content inside the web editor.

4.2 Rich Text Editor Features

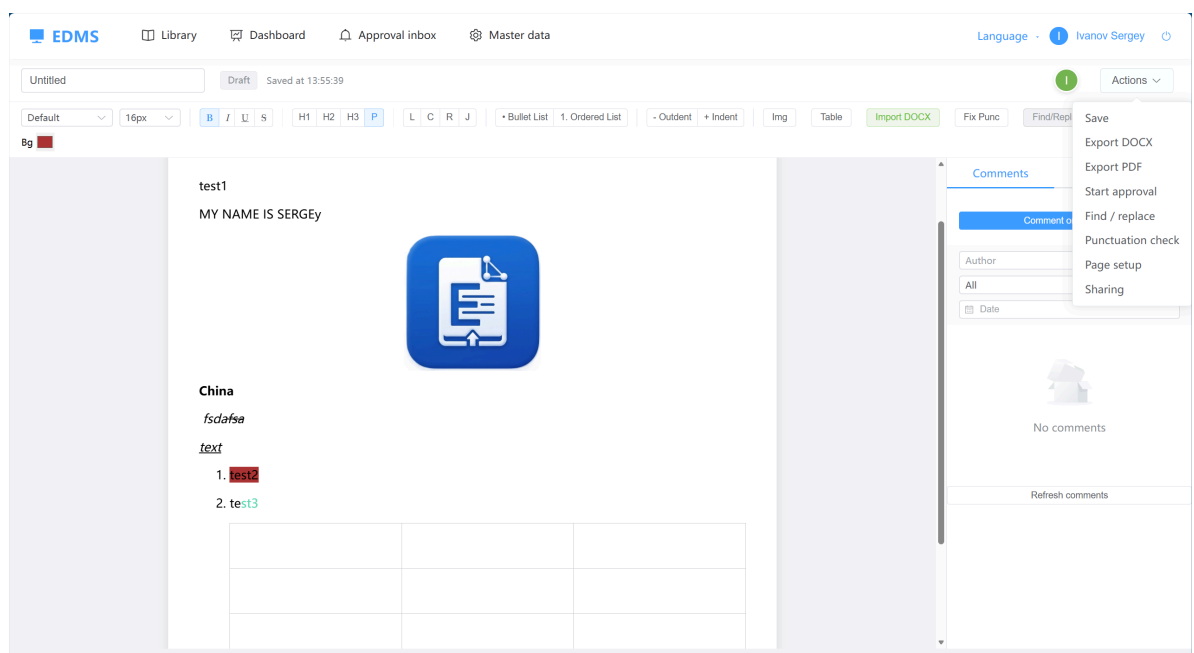

The system utilizes a powerful built-in rich text editor (Tiptap). Your changes are saved automatically.

- **Typography & Style:** Font sizes, bold, italic, underline, and strikethrough.
- **Structure:** Multi-level headings, bulleted lists, and numbered lists.
- **Formatting:** Text alignment, line spacing, text color, and background highlighting.
- **Page Settings:** You can adjust formatting options seamlessly within the editor view.

4.3 Exporting Documents

At any time, document owners or users with read access can export the document.

- Click the **Export** button in the editor.
- Choose between **PDF** (generated via backend PDF tools) or **DOCX** format.
- The file will automatically download to your local device.

5. Collaborative Work & Commenting

5.1 Sharing Access

As a document owner, you can share your draft with colleagues to collaborate before the official approval.

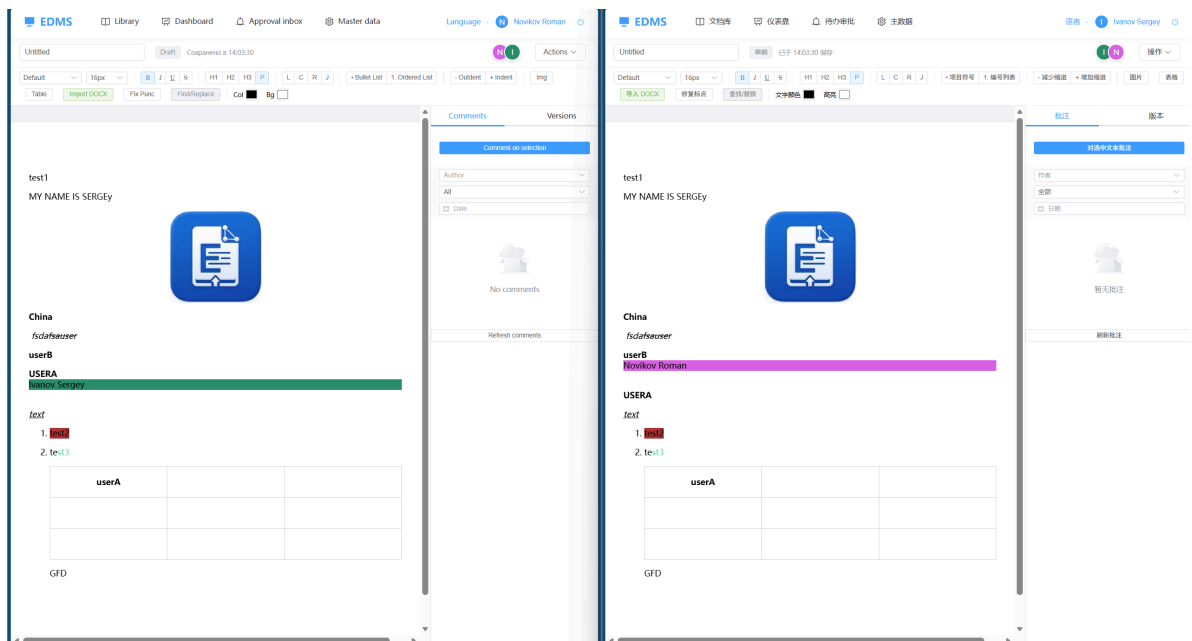

1. Open the document and click **Share**.
2. A dialog box will appear. Select enterprise users and assign permissions: **View**, **Comment**, or **Edit**.

5.2 Real-Time Collaboration

- When multiple users with "Edit" access open the document, the system connects via WebSockets.
- You will see colored cursors identifying where your colleagues are currently typing.
- Changes appear on your screen in real-time.

5.3 Commenting

1. Highlight any text fragment in the document.
2. Add a comment explaining your suggestion or question.
3. Other users can reply to your comment, creating a discussion thread.
4. The document owner or an authorized editor can mark the comment as **"Completed"** once the issue is resolved.

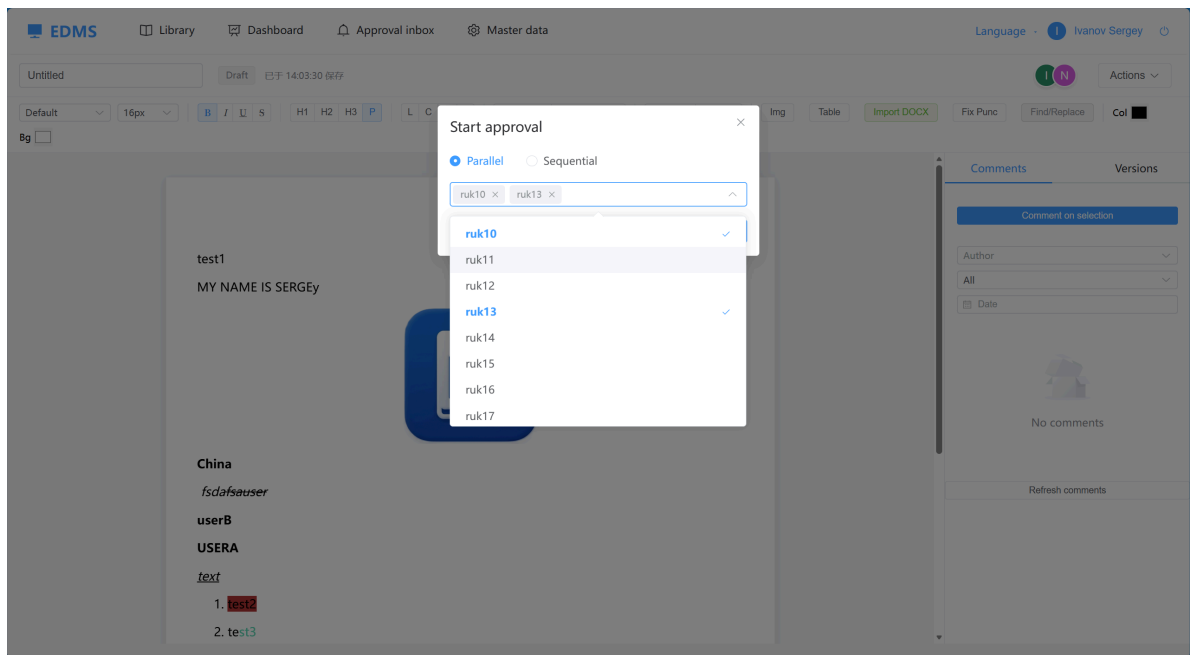

6. The Approval Process

6.1 Launching an Approval

When your draft is finalized, you can send it for official approval.

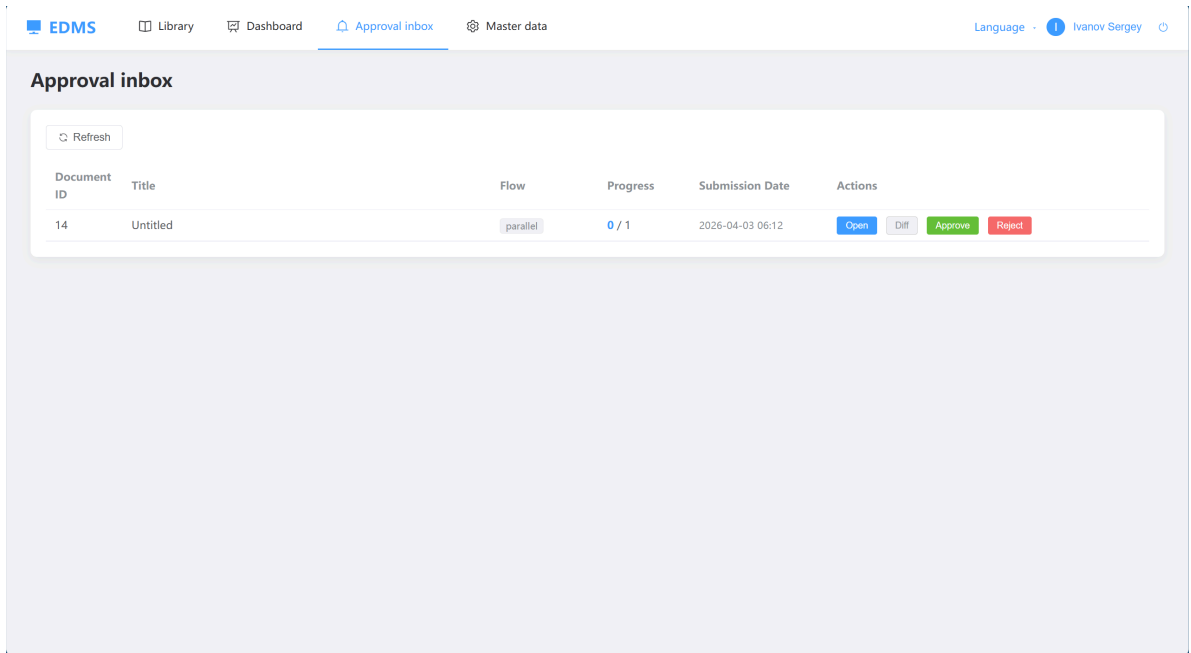

1. Click **Launch Approval**.
2. Select the required managers/approvers from the enterprise list.
3. Choose the Approval Type:
 - **No Strict Order:** All assigned approvers can review and vote at the same time.
 - **Strict Order:** Approvers must review the document sequentially.
4. The document status will update to **In Approval**.

6.2 Inbox (For Approvers)

If you are assigned to approve a document, you will find it in your **Inbox View**.

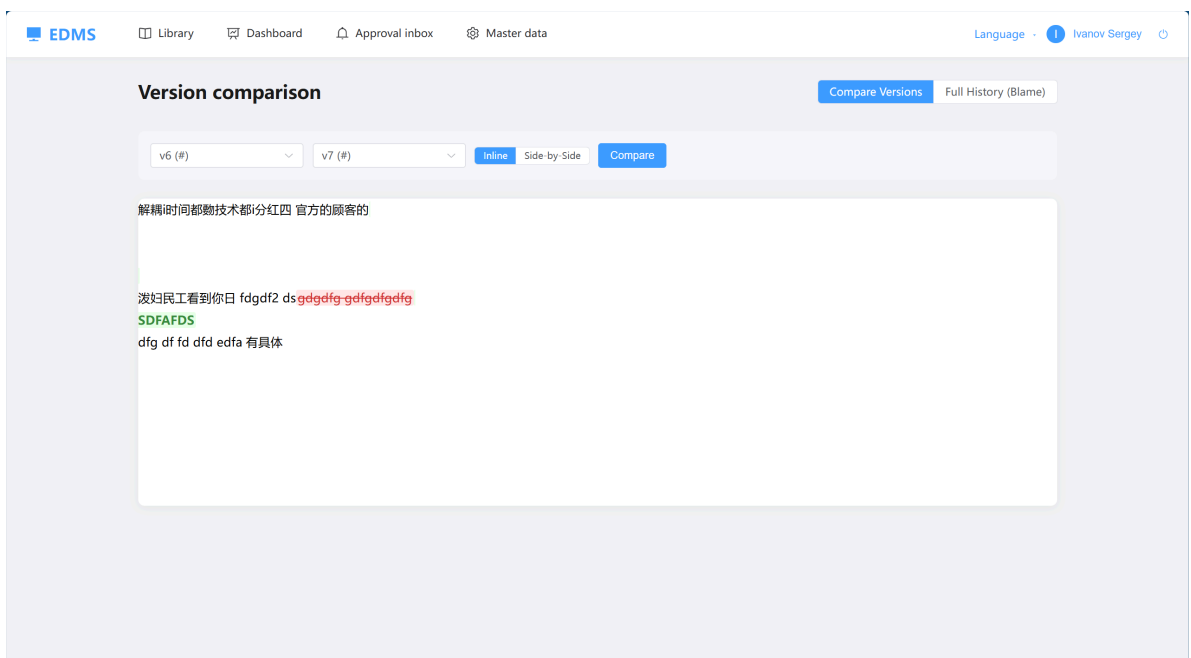

1. Open the document to review the content and any unresolved comments.
2. Click **Approve** or **Reject**.
3. *If Rejecting:* You must enter a reason for refusal. This is saved to the approval history. The document will change to **Rejected** status and editing will be locked.

7. Versioning and Diff Comparison

If a document is rejected, the owner must create a new version to address the manager's feedback.

1. The author edits the document, creating a new iteration.
2. The author re-launches the approval process.
3. When managers review the updated document, they can open the **Diff View** (Compare Versions).
4. The system automatically compares the old text with the new text. It visually highlights **added text (green)** and **deleted text (red)**, making it exceptionally easy to verify what changes were made.
5. Once all approvers accept the changes, the document is marked as **Approved** and becomes part of the permanent corporate library.
