

EDMS System Deployment Manual

This manual is intended for system administrators to install and deploy the EDMS (Electronic Document Management System).

Table of Contents

- 1. [System Requirements](#)
 - 2. [Deployment Steps](#)
 - 3. [Configuration Guide](#)
 - 4. [Post-Deployment Verification](#)
 - 5. [Troubleshooting](#)
 - 6. [Maintenance Operations](#)
-

System Requirements

Hardware Requirements

Component	Minimum	Recommended
CPU	2 cores	4 cores
Memory	2 GB	4 GB
Disk Space	5 GB	20 GB
Network	100 Mbps	1 Gbps

Software Requirements

- Docker 20.10+
- Docker Compose 2.0+

Supported Operating Systems

- Mainstream Windows and Linux systems
 - All X86 architecture systems that can properly install Docker
-

Deployment Steps

Step 1: Extract Deployment Package

1. **Download the deployment package** (`edms-deployment.zip`)
2. **Extract the package** to a suitable directory:
 - Windows: Right-click and select "Extract All"
 - Linux/macOS: Use `unzip edms-deployment.zip`

Step 2: Install Docker

- **Windows:** Install Docker Desktop from the official website
- **Linux:** Follow the official Docker installation guide for your distribution
- **Verify installation:**

```
docker --version
docker-compose --version
```

Step 3: Start Services

Windows

1. **Open Command Prompt** as administrator
2. **Navigate to the bin directory:**

```
cd path\to\edms-deployment\bin\windows
```

3. **Start the services:**

```
start.bat
```

Linux/macOS

1. **Open Terminal**
2. **Navigate to the bin directory:**

```
cd path/to/edms-deployment/bin/Linux
```

3. **Add execute permissions:**

```
chmod +x Linux/*.sh
```

4. **Start the services:**

```
./start.sh
```

Step 4: Stop Services

Windows

```
stop.bat
```

Linux/macOS

```
./stop.sh
```

Configuration Guide

Environment Variables

You can customize the deployment by editing the `bin/.env` file:

Variable	Description	Default	Required
<code>WEB_PORT</code>	Web service port	80	Yes
<code>JWT_SECRET_KEY</code>	JWT signing key	Auto-generated	Yes
<code>CORS_ORIGINS</code>	Allowed CORS origins	http://localhost	No
<code>DATABASE_URL</code>	Database connection string	sqlite:///app/data/edms.db	No

Example configuration:

```
# Custom web port
WEB_PORT=8080

# Custom JWT secret key (recommended for production)
JWT_SECRET_KEY=your-secure-secret-key-here

# Allow multiple origins
CORS_ORIGINS=http://localhost,http://your-domain.com
```

Data Persistence

All persistent data is stored in the `bin/data/` directory:

- `bin/data/backend/` - Application data and SQLite database

Important: Back up this directory regularly to prevent data loss.

Post-Deployment Verification

1. Service Status Check

```
docker ps
```

2. Log Verification

```
# Windows
docker-compose -f bin\docker-compose.yml logs -f

# Linux/macOS
docker compose -f bin/docker-compose.yml logs -f
```

3. Frontend Access Test

- Open browser and navigate to <http://localhost>
- Verify login page loads correctly

Troubleshooting

Port Already in Use

Error: Port 80 is already in use

Solution:

1. Edit `bin/.env` file
2. Change `WEB_PORT` to an available port (e.g., 8080)
3. Restart services

Container Fails to Start

Check Logs:

```
docker logs edms-backend
docker logs edms-frontend
```

Common Causes:

- Insufficient disk space
- Memory limits
- Port conflicts

Database Connection Issues

Solution:

1. Verify data directory permissions
 2. Check database file integrity
 3. Review backend logs for specific errors
-

Maintenance Operations

View Logs

```
# windows
docker-compose -f bin\docker-compose.yml logs -f

# Linux/macOS
docker compose -f bin/docker-compose.yml logs -f
```

Restart Services

```
# windows
docker-compose -f bin\docker-compose.yml restart

# Linux/macOS
docker compose -f bin/docker-compose.yml restart
```

Backup Data

```
# Stop services first
./Linux/stop.sh # or windows\stop.bat

# Backup data directory
tar -czvf edms-backup-$(date +%Y%m%d).tar.gz bin/data/

# Restart services
./Linux/start.sh # or windows\start.bat
```

Update Deployment

1. Backup existing data
2. Stop services
3. Extract new version over existing files
4. Start services

Support and Feedback

For technical support, please contact the system administrator or development team.
